

LICENSE TO USE THE HDA+ DATASET

The HDA+ DATASET is an image sequence acquired from multiple cameras at the Institute for Systems and Robotics at IST Lisboa, by the computer and robot vision group (VISLAB). The dataset is described in <http://vislab.isr.ist.utl.pt/hda-dataset/>

The dataset is licensed in a per researcher basis and is free to use for scientific research purposes. To preserve the privacy of all persons recorded in the images, each researcher to whom the database is licensed (responsible researcher) must sign the present declaration.

Mr./Ms. _____ AGREES THAT

- 1) The images and videos contained in this dataset, can be used only by the responsible researcher, for developing scientific research algorithms and procedures on computer vision, surveillance, distributed camera networks and related fields. It is strictly forbidden to distribute images or videos for any other purpose.
- 2) Re-distribution is forbidden. Licenses for additional researchers can nevertheless be acquired by request. Appropriate actions must be taken to prevent access to the images by any unauthorized person.
- 3) Individual images at low resolution (below half the original resolution) can be used in scientific publications or dissemination material. However, in any case, the digital sources should be distributed by easily accessible means.
- 4) The licensors of the database reserve the right to request permanent deletion of part or of complete sequences, or cancel the license at any time.
